“There is a wide range of performance on social progress in this world, and it is not completely explained by economic success. There are very high-income countries that are not doing very well on social progress. There are relatively low-income countries that are doing remarkably well on social progress.”

Professor Michael E. Porter, Advisory Board Chair
Driving economic and social growth through collaboration and open data

At Deloitte we believe that business exists for more than just profit. Business has the power and responsibility to positively impact society.

Solving the big issues we face today, requires business, government and civil society to work together in new and innovative ways to design and deliver solutions that create a sustainable and prosperous future for all. Our partnership with the Social Progress Imperative provides a platform to achieve this. We believe the Social Progress Index will make it easier for business to understand where and how it can get involved, helping to prioritise social investment decisions, and galvanise collective action.

Open data fosters both economic and social growth. It underpins government’s engagement with citizens, public sector performance and efficiency improvements, and the life choices made by individuals and communities. Deloitte supports the Open Government Partnership’s agenda around greater transparency and access to open data for wider societal benefit.

As governments and citizens all over the world embrace ‘open’, the drivers of growth and profit will become inseparable from transparency and social responsibility. These changes have profound implications for the way businesses operate and the things they do to contribute to solving societal issues.

Measured by the 2013 Social Progress Index
THE SOCIAL PROGRESS INDEX MODEL
Social progress is the capacity of a society to meet the basic human needs of its citizens, establish the building blocks that allow citizens and communities to enhance and sustain the quality of their lives, and create the conditions for all individuals to reach their full potential.

This definition aims to be comprehensive, and encompass the numerous aspects which constitute this overall goal. This overall definition can be disaggregated into three dimensions of social progress, that define the basic architecture of the model.
Does a country provide for its people’s most essential needs?

Are the building blocks in place for individuals and communities to enhance and sustain wellbeing?

Is there opportunity for all individuals to reach their full potential?

The Social Progress Index model reflects some important methodological advances.

It is based exclusively on non-economic indicators. While aspects of social progress may be influenced indirectly by economic development (by providing society more resources to address social imperatives), the Social Progress Index is distinct from traditional measurement of economic success. We can examine its link with economic success because we do not combine economic and social indicators in the model.

The Index is based exclusively on indicators of social outcomes rather than measures of inputs such as spending or policy choices, which do not truly evaluate social progress but the efforts made to achieve it.

The model is holistic, integrating a large number of indicators into an aggregate score of social progress, instead of focusing on one or a few aspects of social progress.

The Index model groups these multiple social outcomes into dimensions, components, and indicators, allowing empirical investigation of the relationships.

The breadth of indicators create a model relevant for all countries, ranging from very poor nations that have not yet met the essential needs of many citizens to advanced nations enjoying high levels of wellbeing and well functioning communities.
Economic development does not fully explain Social Progress

This graph shows a substantial correlation between social progress and economic development. This is not surprising, given that countries with higher levels of income have greater resources to meet the needs of their populations. However, the data also reveal significant divergences between social progress and economic development across the income spectrum. Economic development does not fully explain social progress.
The role of the Social Progress Network

The Social Progress Network is the mechanism by which we engage local partner organizations in each country covered by the Index.

The role of the Network is to convene stakeholders in government, business and civil society around a shared understanding of priorities for social progress, identify solutions, and drive collective action.

Social Progress Network partners will:

- **Interpret and disseminate results**
- Help extend and enhance data collection and local and regional research
- Lobby the local government at all levels to pursue policy changes related to social progress priorities
- **Provide continuity** of social progress efforts across changes in government
